PTO-326 (Rev. 04-01)

Application/Control Number: 10/044,122

Art Unit: 2825

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-2, drawn to controlling slew rate, classified in class 716, subclass
   6.
- II. Claims 3-4, drawn to an IC device, classified in class 716, subclass 1.
- III. Claim5-7, drawn to mapping a signal driver to a pad, classified in class716, subclass 13.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as for analyzing and designing timing paths; invention II has separate utility

such as for the design of a physical IC device having a specified metal layer; invention III has separate utility such as for global routing. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
